

Globe Valve

CLASS 150# - 900# GLOBE VALVES are conventional bolted bonnet and Outside Screw and Yoke style with metal sealing surfaces. Globe valves are uni-directional valves and of safe operation being widely used in power, chemical and oil industry. The flow comes upwards underneath the valve seat. Its top entry to the trim permits easier servicing of the internal parts by disassembling the bonnet flange. Stem packing is made of flexible graphite and gasket cover flange of stainless steel with graphite fiber.

Valves are standard operated by an ergonomic hand wheel, however can optionally incorporate worm gears, pneumatic, electric, hydraulic and hydro-pneumatic actuators.
